giuliarambelli.github.io/
Italian (native) | English & French (proficient)

I am a computational and cognitive linguist working at the intersection of artificial intelligence, theoretical linguistics, and human communication. My research investigates how meaning is constructed, generalized, and innovated in language, both by humans and large language models, through the study of compositionality, analogy, and conceptual abstraction. I combine deep linguistic expertise with computational methods to advance our understanding of AI and language.
